PROFESSIONAL SUMMARY

Protocol-minded Blockchain Developer focused on building production-grade Web3 systems across Solana, EVM, and emerging multi-chain ecosystems. Experienced in smart contract development, DeFi protocols, prediction markets, oracle integrations, multi-chain grant/escrow infrastructure, treasury risk infrastructure, and stablecoin-based applications. Strong background in delivering end-to-end blockchain products from contract architecture to frontend and wallet integration, with a research-driven approach to evaluating emerging protocols and ecosystems.

TECHNICAL SKILLS

Blockchain: Solidity, Rust, Solana, Anchor, Ethereum, EVM, Polygon, Casper, Stellar, Hardhat, Chainlink, USDC, SPL Token, OpenZeppelin, ERC-721

Languages: JavaScript, TypeScript, Rust, Solidity, SQL

Frameworks & Tools: React.js, Next.js, Node.js, Express.js, Wagmi, RainbowKit, Ethers.js, Web3.js, Prisma, PostgreSQL, MongoDB, IPFS, Git

PROFESSIONAL EXPERIENCE

Blockchain Developer (Intern Oct 2025 – Mar 2026 → Part-time Mar 2026 – Present)

AppAvengers

- Developed a decentralized lottery platform on Solana using Anchor and Rust with USDC-based participation across multiple wallet flows
- Integrated Switchboard-powered randomness and automated winner selection mechanisms for transparent prize distribution
- Configured wallet integrations, program authorization logic, and transaction workflows across multiple Solana accounts
- Contributed to an Aave-inspired DeFi lending prototype utilizing Fhenix encryption technology on Ethereum
- Researched liquidity aggregation and routing architectures within the Stellar ecosystem; progressed to part-time with independent research and architecture responsibilities

Blockchain Developer Intern

Mar 2025 – May 2025

QuadB Technologies

- Migrated Solana-oriented systems to EVM-compatible smart contract architecture
- Engineered modular Solidity contracts and integrated RPC-based interaction layers across multiple modules

Blockchain Developer Intern

Feb 2025 – Jun 2025

Finsocial Digital Systems

- Built Solidity smart contracts powering token swaps, futures trading, and decentralized exchange workflows
- Integrated multiple Chainlink price feeds for real-time market data, PnL tracking, and settlement calculations

KEY PROJECTS

TreasuryOS (Multi-Chain Treasury Risk & Attestation Platform)

2026

Solidity, TypeScript, Next.js, Wagmi, PostgreSQL, Prisma, Ethereum (Sepolia) | Live Demo | GitHub

- Built a treasury monitoring platform scanning wallet holdings across multiple assets (ETH, WETH, USDC) to generate deterministic risk reports
- Modeled concentration and stress-test risk calculations covering multiple asset volatility scenarios and stablecoin depeg simulations
- Integrated on-chain attestation via KeeperHub to publish immutable, verifiable treasury risk reports
- Designed indexer and database architecture to track treasury snapshots and attestation history over time

BharatMarket (Prediction Market Protocol)

2026

Solidity, Chainlink Functions, Next.js, TypeScript, PostgreSQL, Prisma, Polygon, USDC | Live Demo | GitHub

- Architected an oracle-driven prediction market exchange on Polygon Amoy with CPMM pricing for YES/NO outcome trading and USDC settlement
- Enabled market creation, liquidity management, portfolio tracking, and wallet-native trading flows across multiple markets
- Integrated Chainlink Functions for automated market resolution using external price data and deterministic settlement rules
- Built backend indexer infrastructure using Prisma and PostgreSQL to track multiple markets, trades, liquidity, and oracle events

GrantFlow (Multi-Chain Grant Funding Protocol)

2026

Solidity, TypeScript, Node.js, Casper, Base, Stellar, Web3.js | Live Demo | GitHub

- Created a grant funding protocol on Casper that manages milestone-based funding through transparent escrow and release mechanisms
- Established workflows for grant creation, milestone validation, and controlled fund distribution across multiple milestones
- Architected the protocol for future integration with Base and Stellar to enable multi-chain funding and settlement infrastructure

IdentifyMe

2025

Solidity, Hardhat, Next.js, Ethereum | Live Demo | GitHub

- Developed a decentralized identity platform with on-chain, user-controlled profiles and configurable visibility/access controls
- Enabled wallet authentication and profile management through multiple Web3 integrations

EDUCATION

B.Tech in Computer Science

Dec 2021 – May 2025

Indian Institute of Information Technology Vadodara

Secondary Education (Class VI – X) – Jawahar Navodaya Vidyalaya, Basmathnagar

Blockchain Developer Training Certification – QuadB Technologies (Mar 2025)
