PROFESSIONAL SUMMARY

Blockchain Developer and Full Stack Web3 Engineer with 1+ years of production experience building smart contracts, DeFi protocols, and decentralized applications across EVM, Solana, and Starknet ecosystems. Skilled in smart contract engineering (Solidity, Rust, Anchor), protocol architecture, treasury and prediction-market systems, oracle integrations, wallet connectivity, and full-stack development with React, Next.js, TypeScript, and PostgreSQL. Proven record of shipping scalable, production-grade blockchain products end-to-end – from smart contract design and testing to frontend, backend, and deployment.

TECHNICAL SKILLS

Blockchain & Smart Contracts: Solidity, Rust, Solana, Anchor, Ethereum, EVM, Polygon, Casper, Stellar, Hardhat, Chainlink (Price Feeds, Functions), OpenZeppelin, ERC-721, SPL Token, USDC

Languages: JavaScript, TypeScript, Rust, Solidity, SQL

Web3 Libraries: Ethers.js, Web3.js, Viem, Wagmi, RainbowKit

Full Stack & Infrastructure: React.js, Next.js, Node.js, Express.js, Prisma, PostgreSQL, MongoDB, IPFS, Git

PROFESSIONAL EXPERIENCE

Blockchain Developer

Feb 2026 – Present

AppAvengers (Remote)

- Shipped production-grade Web3 applications and smart contracts across EVM, Solana, and Starknet ecosystems.
- Developed smart contracts, wallet integrations, and on-chain transaction workflows using Solidity, Rust, and TypeScript.
- Contributed to TreasuryOS, Cardano integrations, and multi-chain blockchain infrastructure initiatives.
- Built scalable full-stack applications and APIs using Next.js, PostgreSQL, and modern Web3 tooling.

Blockchain Developer Intern

Oct 2025 – Jan 2026

AppAvengers (Remote)

- Developed decentralized applications and smart contracts for Solana and EVM-based ecosystems.
- Implemented wallet connectivity, on-chain/off-chain interactions, and transaction management systems.
- Collaborated on DeFi protocol design and blockchain architecture initiatives for production-ready applications.

Blockchain Developer Intern

Feb 2025 – Jun 2025

FinSocial Digital Systems (Remote)

- Built smart contracts for token swaps, leveraged futures trading, and decentralized exchange (DEX) workflows.
- Integrated Chainlink price feeds for real-time market data, PnL tracking, and settlement calculations.
- Implemented PostgreSQL-backed infrastructure for user history and order management.

Blockchain Developer Intern

Feb 2025 – May 2025

QuadB Technologies (Remote)

- Contributed to adapting Solana-based infrastructure for EVM-compatible environments.
- Developed Solidity modules and integrated RPC-based interaction layers.
- Worked on blockchain interoperability and cross-chain infrastructure components.

KEY PROJECTS

TreasuryOS (AI-Powered Treasury Intelligence Platform)

2026

Next.js, TypeScript, PostgreSQL, Viem, OpenRouter, Ethereum, Uniswap V3, Aave V3 | Live Demo | GitHub

- Built an AI-powered treasury intelligence platform analyzing on-chain treasury positions across Wallet, Uniswap V3, and Aave V3 on Ethereum.
- Developed a Treasury Intelligence Engine featuring composite risk scoring, stress simulations, liquidation analysis, and deterministic recommendations.
- Implemented AI-generated treasury briefings using OpenRouter and integrated KeeperHub for verifiable on-chain attestations and execution planning.
- Designed protocol-aware analytics supporting LP position discovery, lending exposures, APY analysis, and portfolio health monitoring.

BharatMarket (Prediction Market Protocol)

2026

Solidity, Chainlink Functions, Next.js, TypeScript, PostgreSQL, Polygon, USDC | Live Demo | GitHub

- Architected an oracle-powered prediction market protocol on Polygon with CPMM pricing and USDC settlement.
- Implemented market creation, liquidity management, portfolio tracking, and wallet-native trading workflows.
- Integrated Chainlink Functions for automated market resolution using external data and deterministic settlement rules.
- Built PostgreSQL and Prisma-backed indexing infrastructure to track markets, trades, liquidity, and oracle events.

EDUCATION

B.Tech in Computer Science

Dec 2021 – May 2025

Indian Institute of Information Technology Vadodara

Secondary Education (Class VI – X) – Jawahar Navodaya Vidyalaya, Basmathnagar

Blockchain Developer Training Certification

Mar 2025

QuadB Technologies
